

Dirty Buildster - Challenge

You show up with two bags (preferably opaque) containing **100 LEGO elements each**. Please make sure the parts you bring are clean!

EACH bag needs to contain **20 basic bricks**. This can be anything from a 1x1 up to a 1x16 or 2x10. They can be all one color or mixed colors. But they can't be slopes, facet bricks, or inverted bricks.

EACH bag needs to also contain **80 elements that are not basic bricks**. They can be anything at all, plates, minifig pieces, support elements, Galidor parts, wheels without rims, etc. It's ok to include parts that and elements someone may have a hard time building with. They **DO** have to be real LEGO elements.

No particular element can be repeated more than 10 times in a single bag, regardless of color. So you can't give someone 80 1x1 plates, just 10 at the most. But you could put 10 1x1 plates in each bag, if you so desired.

The pieces will be counted the way they come out of the poly bags in a set. For instance: you can put in a minifig torso with its arms and hands intact as a single piece, but you cannot put in just two hands, one torso, and two arms and count this as five pieces, since when you received them in a set they were already connected, so they only count as one piece.

No pawning your knock-off brand pieces on someone else. Pieces are also to be clean and in good to new condition (no cracked, broken, chewed, dirty, written on, or melted pieces).

Bags will be randomly distributed, making sure that no one ends up with either of the bags that they brought.

You are then stuck with the bags that you receive. You will then have at least 24 hours (possibly more, depending on the exact schedule for this year's event) to build something, anything. You may build whatever you like and use as many or as few of the 200 pieces as you wish, **but you cannot use any pieces other than the 200 pieces in the two bags you receive**. The "creations" will then be displayed in the main hall, and judged to determine a winner. The winner - that is, the person who built the best creation using other people's spare parts - will be announced at the awards ceremony.
